

MASS TRANSFER FROM
FALLING DROPS.

A Thesis submitted for the Degree of
Doctor of Philosophy
Indian Institute of Technology, Delhi.

by C.L. PRITCHARD, M.A.
DEPARTMENT OF CHEMICAL
ENGINEERING, IIT DELHI
NEW DELHI-29.

1st SEPTEMBER 1967.

A C K N O W L E D G E M E N T S

I wish to thank Dr. P.N.Sehgal, Dr. S.K.Biswas and Prof. F.Rumford for their sustained interest and encouragement in this work. I am grateful to Mrs. Jane Buckle for typing the draft, to Mr. H.C.Bhatia for typing the manuscript, and to Mr. R.T.Russell for putting the resources of the Workshops at my disposal.

The laboratory and drawing office staff of the Chemical Engineering Department have been unfailingly helpful. Mr.Jodh Singh provided valuable assistance in the photographic work.

The Ministry of Education, Government of India, New Delhi, supported this work through the award of a Commonwealth Fellowship. The assistance of the British Council is also acknowledged.

Chapters:	page
1. Introduction	1
Predicting exaporation from liquid droplets. Operating variables.	
Scope of the present work.	
2. The Penetration theory of Mass Transfer	4
Development of Penetration theory from earlier theories and models. Comparison of the predictions of various theories, and means of distinguishing the mechanism controlling mass transfer. Systems to which the Penetration theory is known to apply.	
3. The Evaporation of a Freely Falling Drop	9
Development of a model for the evaporation of a falling drop. Survey of available experimental methods and choice of operating variables. Description of experiments and summary of results. Significance of results and of the choice between the available models for mass transfer.	
4. The Effect of Surface-Active Agents	21
Theories of the effect of surfactants on mass transfer. Development of a theory to predict the effect of surfactants on the evaporation of liquid drops. Prediction of change in evaporation from liquid drops when surfactants are present. Experimental results and conclusions.	
5. The Evaporation of Sprays	31
Complicating factors in spray systems. Applicability of equations already derived for single drops. Experimental variables and measurement techniques. Experimental arrangement and procedure. Model to predict change in Sauter mean diameter. Model to predict Sherwood number. Comparison of results with these predictions. Effect of evaporation on saturation of air. Overall mass balances. Conclusions.	
6. Conclusion.	49
Summary of results and limitations of the present work. Suggestions for further research.	

Appendix.

1. Analytical and Numerical Solutions to the Equations of Motion and Evaporation 52

Derivation of analytic solutions in the Low, intermediate and high Reynolds' number ranges, for simplified conditions of zero gravity or zero drag. Derivation of parametric evaporation equations. Effect of fluid properties on drag coefficient and hence on path length for given amount of evaporation, with sample calculations.
2. Specimen data and calculations for single drop systems. 68
3. Tables of results for single drop systems with surfactants. 72
4. Specimen data and calculations for spray systems 79

Data for spray at 0.98 ocs/sec: drop counts, temperatures and humidities.
5. Tables of results for spray systems. 84

Air velocities. Mass-mean and Sauter-mean diameters.
Predictions of Δd_s and Sherwood number.
6. Secondary Calculations:
 - A Critical drop sizes for pure liquids 86
 - B Temperature relaxation of a drop in an airstream 87
 - C Effect of turbulence on the evaporation rate 88
 - D Vapour concentration in the dropping tube 89
 - E Wall effect on drop velocity. 90
 - F Effect of the velocity gradient in the cocurrent airstream 91
 - G Effect of internal circulation on the drag coefficient. 92
 - H Effect of surface-active materials. 93

(Appendix 6 contd).

I	Effect of radial vapour outflow (Stéfan flow)	94
J	Effect of drop oscillation on rate of evaporation.	95
K	Interaction between external flow and surfactant effect.	96
L	Mass transfer in forward and wake regions	97
M	Effect of velocity on separation angle	98
N	Temperature relaxation times for drops in sprays.	99
O	Radial vapour outflow in sprays .	100
P	Effect of proximity of drops in the spray	100
Q	Effect of turbulence on spray evaporation	102
R	Effect of internal pressure on vapour pressure	102
T	Analysis of variance of experimental data	106
	(1) Test of Penetration theory	
	(2) Test of Amended theory	
S	Mass transfer dependence on diffusivity	103
7.	Mass transfer in Wakes.	111
	Experimental observations on local mass transfer rates in the wake of solid spheres in fluid streams. Method of assigning mass transfer to forward or wake area. Comparison of predictions of various flow models with experimental results. Prediction of mass transfer from flow conditions.
